

# HAI or alive

A System for hands hygiene and statistical data monitoring of HCW (Health Care Worker) to encourage hand hygiene and prevent HAI in hospitals

## HAI - Hospital Acquired Infection

### Market size:

One of 25 patients acquires a health care-associated infection (HAI) during their hospital care, adding up to about **722,000 infections a year in the US**. Of these, 75,000 patients die as a result of the infections.

"Even the most advanced health care will not work if clinicians neglect basic practices such as hand hygiene" (CDC- Centers of disease control Director Thomas Frieden, MD, MPH)

**Total Number of All U.S. Hospitals- 6,210**

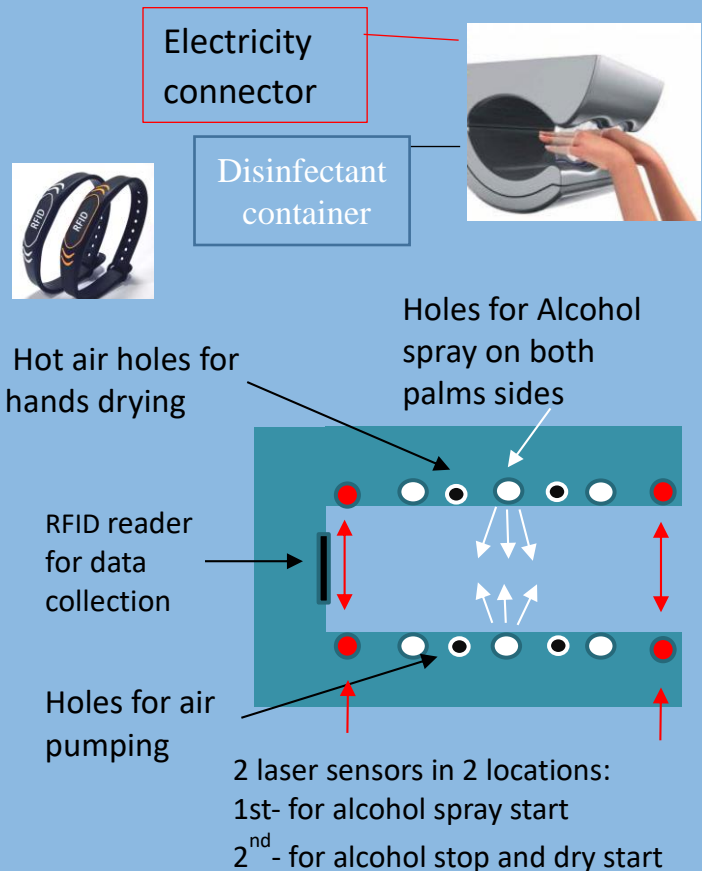

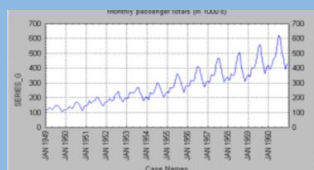

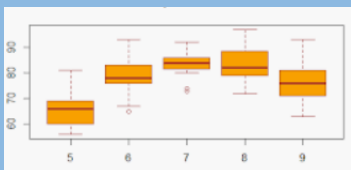

It's in your hands!

### Our offer:

Fast and easy solution for hands hygiene, and will collect statistical data for each HCW using **RFID bracelet**. The system will give the opportunity to be recognized for high rate of hand hygiene activities

- The system will give statistical data per HCW/by time trend
- A trend up is expected in hand hygiene using the system in hospitals

Optional companies to connect to: **Dyson**
